GENERAL NOTES

- These instructions are also available on our website; www.synergymfg.com. Check the website before you begin for any updated instructions and additional photos or videos for your reference.
- These rear sway bar link drop brackets are designed to be used with lifts 2" or taller.

TOOLS REQUIRED

• 15mm and 17mm Wrenches or Sockets

INSTALLATION

- 1. Make sure vehicle is parked on a flat level surface with transmission in park or in gear and parking brake set.
- Remove two bolts holding driver side rear sway bar bracket to frame. Discard hardware. See Figure 1.

Figure 1. Driver Side Rear Bracket Removed from Frame

- 3. Loosen but do not remove hardware holding passenger side rear sway bar bracket to frame. Sway bar should be loose and able to move.
- 4. Install spacer block in between driver side frame and sway bar bracket. Loosely install provided hardware with a washer under the bolt head. See **Figure 2**.

Figure 2. Driver Side Spacer Block Installed

- 5. Remove passenger side bracket from frame and discard hardware.
- 6. Install spacer block in between passenger side frame and sway bar bracket. Loosely install provided hardware with a washer under the bolt head.
- 7. Make sure brackets and sway bar are centered. See Figure 3.

Figure 3. Passenger Side Spacer Block Installed

- 8. Torque mounting hardware to 35 lb-ft.
- 9. Check bolt torques again after approximately 100 miles.
